OBJECTIVE

Seeking for a role in development as a Frontend Developer to utilize my Technical, Problem Solving and Managing skills in developing sophisticated applications, also to enhance my knowledge in new and emerging technologies like JavaScript, HTML, CSS, React.js, Next.js and AWS Cloud.

EXPERIENCE

Software Engineer: Tata Consultancy Services
November 2021 - Current

- I have been part of an agile development team that develops and maintains Chrome extension "Sidekick" product with regular release cycles.
- Being joined as a fresher soon I started undertaking major work items that added value to the clients.
- **Sidekick Chrome Extension**, an application which serves as an on-the-go assistant that delivers context-sensitive information directly within Google Chrome, improving efficiency in daily work tasks.
- **Sidekick Plugin (Browser Extension):** an react and Rest API-based application. This is the browser extension which takes care of injecting UI extensions (page extensions) within any Sales Application (Harmony, Totango, Outreach).

MAJOR WORK:

- Implemented the injection of drag able button with dropdown options to the outreach application for easy access of supporting side application of outreach.
- Developed a feature which will allow user to choose the ratio between two opened tabs simultaneously for better viewing of the page side by side.
- Worked on implementing the injection of easy access toolbar to access the daily use options used by SAP sales team.
- Worked on implementing the injection of several warning banner for specific conditions with a hyperlink to get more information.
- Worked on developing the AI chatbot.
